Who are we?

- Revenit is a provider of refurbished networking equipment, servers, storage, services, and third party maintenance.

- Revenit was created two years ago by Lucie Posada, Sandra Vieira and myself.

- We have been in this industry for more than 20 years.

REVENIT

Automated Testing

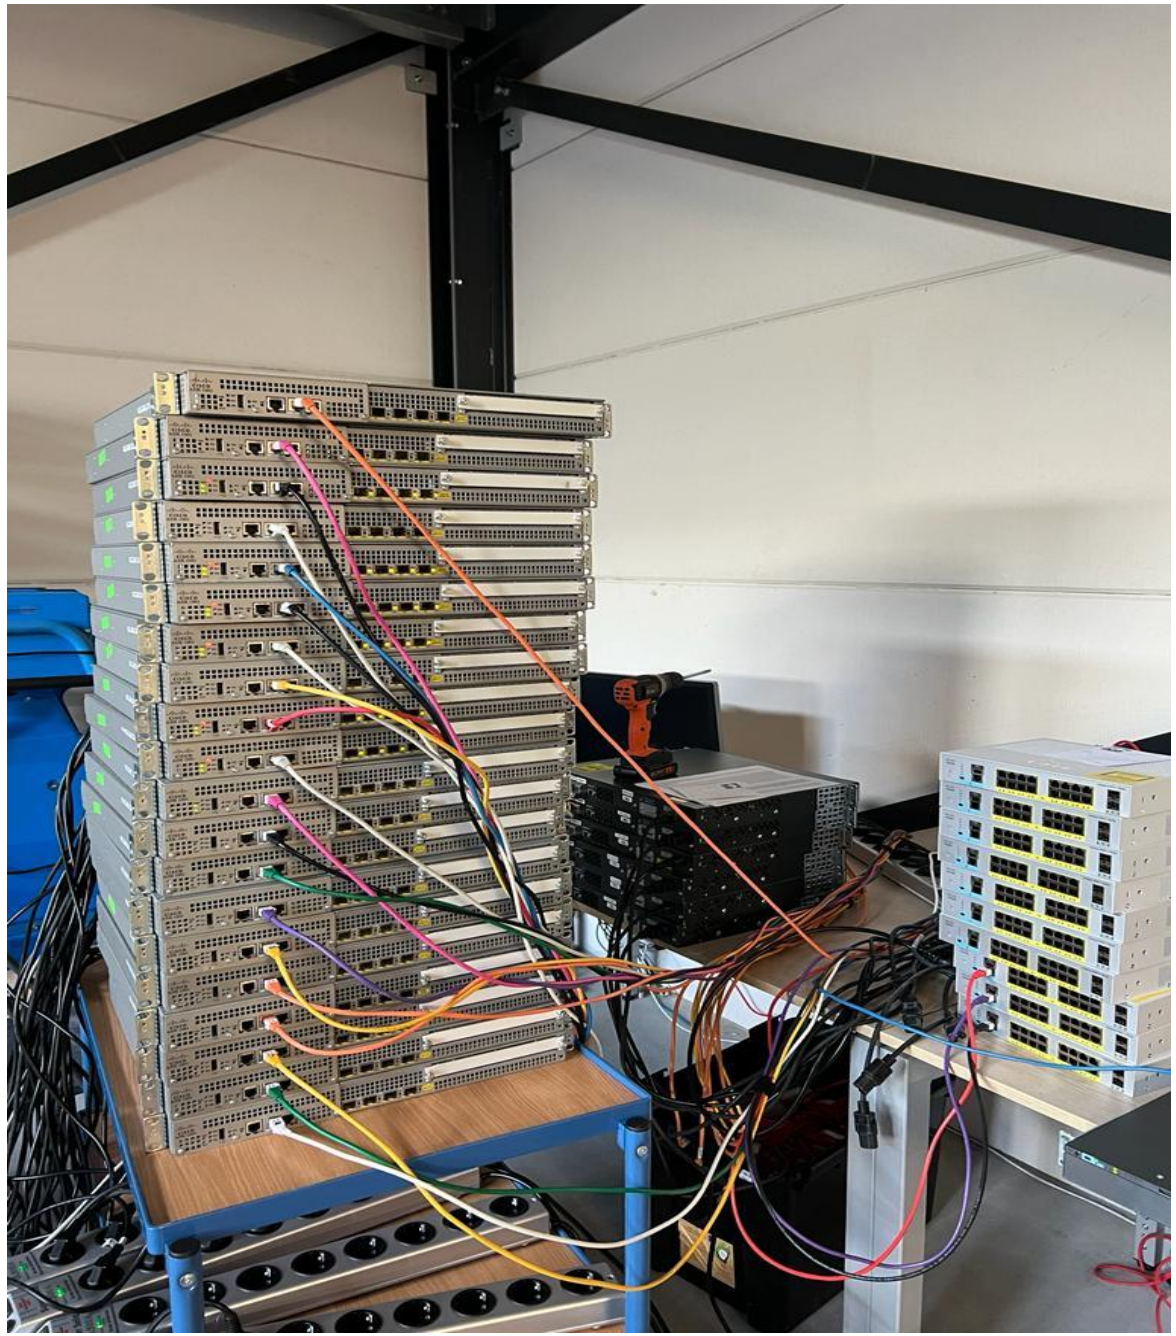
- A big part of the refurbishment process is factory reset and erasing private data
- We have developed a software application that automates this process
- The software works together with a terminal server so that we can have many console connections.

REVENIT

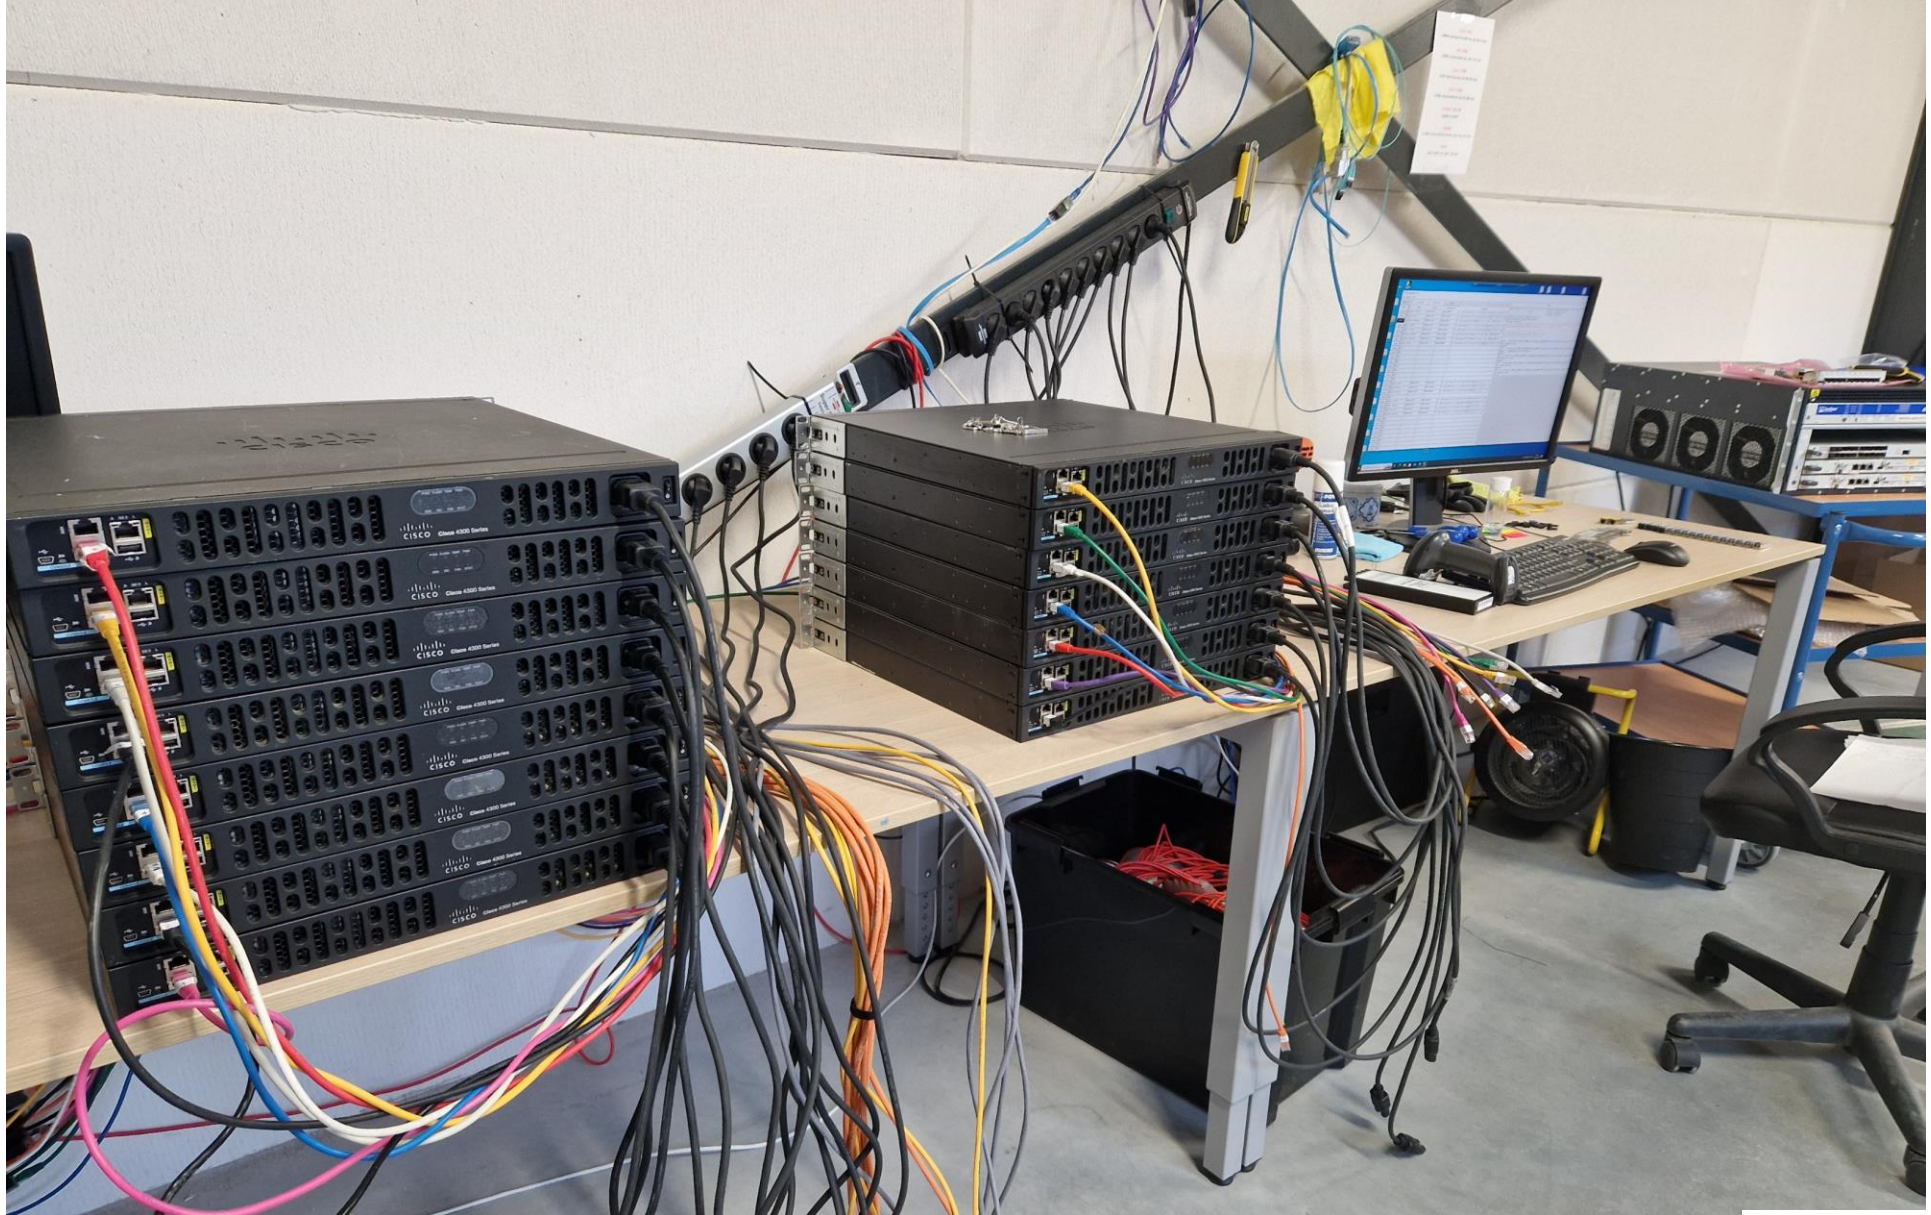
Automated Testing

- The software supports multiple brands of equipment like Cisco, Juniper, Arista, Brocade, HP, and others.

- The software is highly customizable. We can add features that we have not yet thought of.



REVENIT



REVENIT

Why is this interesting to you?

- We can install this testing solution at your location
- You can use this software on devices coming out of deployment and reset them to factory-default and make them ready to be used again.
- The personnel processing the equipment do not need to be very knowledgeable about the factory reset process of the equipment

REVENIT

Why is this interesting to you?

- We can pre-configure devices before shipping to you
- This is interesting when you have a large number of customer premises equipment (CPE’s)
- We can also synchronize os versions across all devices before to the customer

REVENIT

Wrapping up

- Thank you for your time

- If you have any questions, I will be at the beer event.
